

Tarun Mittal

Senior Software Engineer

(+91) 9001542418 | tm.eng2021@gmail.com | linkedin.com/in/t-mittal | github.com/TM-DEV-PRO | Bangalore, India

SUMMARY

- Senior Software Engineer with **5 years of experience** designing and owning cloud-native, high-concurrency distributed systems.
- Expertise in **Python and Go (Golang)** microservices, event-driven architectures, real-time and batch data processing, **Agentic AI and RAG systems**.
- Proven track record of leading **backend migrations** and improving system reliability, performance, scalability, and cost efficiency.

SKILLS

- Languages:** Python, Go (Golang), SQL, JavaScript/TypeScript.
- Backend & APIs:** FastAPI, Gin, Django, SQLAlchemy, Pydantic, REST, gRPC, WebSockets, SSE, Celery.
- AI & Agents:** LLM agents (OpenAI/Gemini/Claude), LangGraph, LangChain, MCP, RAG, text-to-SQL, semantic caching, pgvector, ChromaDB.
- Streaming & Data:** Apache Kafka, Apache Flink, Apache Spark, Apache Pinot, ClickHouse, BigQuery, DuckDB.
- Databases & Storage:** PostgreSQL, MySQL, Redis, MongoDB, Cassandra, Elasticsearch, Amazon S3.
- Cloud & Infrastructure:** GCP, AWS, Docker, Kubernetes, CI/CD, ELK, Grafana, New Relic, Sentry.
- Core Engineering:** Data Structures & Algorithms, System Design (HLD/LLD), Concurrency, DBMS, Operating Systems, Unit Testing.

PROFESSIONAL EXPERIENCE

Senior Software Engineer IMPACT ANALYTICS, Bangalore June 2026 – Present

Agentic AssortSmart (Multi-Agent Merchandise Planning Platform)

- Architected a **multi-agent planning system with 5 domain agents** that converts natural-language questions into validated execution DAGs, improving plan correctness from **0.54 to 0.99** in offline evaluation.
- Designed an **agentic store-clustering copilot** with three human approval gates, cutting plan finalization time from days to **under 1 hour** and run failures from **8.5% to under 2%**.
- Building **Go (Gin)** microservices for plan lifecycle, reference data, and bulk save APIs, with JWT auth and validation middleware, goroutine worker pools for concurrent writes, and context-based timeouts.
- Led adoption of **ClickHouse as the unified transactional and analytical planning store**, designing an insert-only versioned write model that powers overrides, version diff, and undo/redo with zero mutation backlog.
- Built the **BigQuery to ClickHouse ingestion pipeline** with nightly precompute and reconciliation, serving agent probes at **p95 under 500ms**.
- Tech Used:** Python, FastAPI, LangGraph, MCP, Go, Gin, ClickHouse, BigQuery, PostgreSQL, pgvector, Redis, Kafka, GCP.

Software Engineer UBER (via EPAM Systems), Bangalore July 2024 – May 2026

Financial Risk Management (FRM) Scoping Platform (Uber Finance)

- Cut Uber's quarterly financial risk-scoping cycle time by **70%** by replacing a manual Google Sheets workflow with a FastAPI and MySQL platform serving **36 REST endpoints across 8 screens**; output feeds PwC audit work papers.
- Designed an **8-table normalized MySQL schema** whose quarterly ETL aggregates **19M+ general-ledger rows into 300K rows**, reconciled against public 10-Q filings.
- Migrated raw SQL access to **SQLAlchemy 2.0 ORM**, fixing a latent column-aliasing bug and raising changed-module test coverage to **100%**.
- Tech Used:** Python, FastAPI, SQLAlchemy, Pydantic, MySQL, Redis, Bazel, pytest.

Menu Ingestion & Automation Platform (Uber Eats)

- Built an event-driven ingestion pipeline using **Kafka, Apache Flink, and Apache Spark** that processes **30,000+ vendor menus per month**, cutting onboarding time from 24 hours to 2 hours and saving **\$600K+ annually**.
- Built an AI extraction pipeline with **RAG and Gemini 2.5 Pro** converting PDF and image menus into schema-validated catalog data with **98% fidelity**.
- Increased successful ingestions by **95%** using IP rotation and dynamic proxy pools; added ingestion health analytics on **Apache Pinot**.
- Tech Used:** Python, Apache Kafka, Apache Flink, Apache Spark, Apache Pinot, Selenium, Gemini, GCP, Docker.

Software Development Engineer 2 MASTERS INDIA, Noida December 2022 – June 2024

GST Compliance & E-Invoicing Platform

- Led the migration from a monolithic PHP (Laravel) application to asynchronous **Python (FastAPI) microservices**, cutting p95 API latency from **1.2s to 300ms** for 2,500+ enterprise clients.
- Scaled bulk e-invoice processing to **100,000+ transactions per import and 1M+ daily transactions** with chunked async workers.
- Set up centralized **ELK logging and New Relic monitoring**, speeding up incident triage by 70%; raised test coverage from **35% to 82%**.
- Implemented **encryption, RBAC, JWT auth, and audit logging** for financial compliance data.
- Tech Used:** Python, FastAPI, PostgreSQL, Redis, Celery, Docker, ELK, New Relic, AWS.

Software Development Engineer GEEKSFORGEEKS, Noida August 2021 – November 2022

- Redesigned and migrated the backend from PHP to **Django (Python)**, improving reliability for **100,000+ daily queries**.
- Designed data models and REST APIs for voting and pinning features, increasing **premium subscription sales by 15 to 20%**.
- Developed an influencer dashboard with real-time analytics, **boosting course sales by 30%**.
- Tech Used:** Python, Django, MySQL, Redis, REST, Cron, AWS.

EDUCATION

B.Tech (Information Technology) Institute of Engineering & Technology, Lucknow July 2017 – June 2021

ACHIEVEMENTS

- Ranked **2260 out of 37,000+** participants in the Google Code Jam Qualifier Round 2021.
- Finalist at the **Smart India Hackathon 2020 (MHRD)**, securing a top 3 position nationally.
