

Tarun Mittal			
Senior Software Engineer			
(+91) 9001542418 tm.eng2021@gmail.com linkedin.com/in/t-mittal github.com/TM-DEV-PRO Bangalore, India			
SUMMARY			
- Senior Software Engineer with 5 years of experience designing and owning cloud-native distributed systems. - Expertise in Python and Go microservices, event-driven architectures, and Agentic AI and RAG systems. - Proven track record shipping production systems, leading backend migrations, and improving reliability and scale.			
SKILLS			
Languages: Python, Go (Golang), SQL. Backend & APIs: FastAPI, Gin, Django, SQLAlchemy, Pydantic, REST, WebSockets, SSE, Celery. AI & Agents: LLM agents (OpenAI/Gemini/Claude), LangGraph, LangChain, MCP, RAG, text-to-SQL, pgvector. Streaming & Data: Apache Kafka, Apache Flink, Apache Spark, Apache Pinot, ClickHouse, BigQuery. Databases & Storage: PostgreSQL, MySQL, Redis, Amazon S3. Cloud & Infrastructure: GCP, AWS, Docker, Kubernetes, Git, CI/CD, Observability (ELK, New Relic, Grafana). Core Engineering: Data Structures & Algorithms, System Design (HLD/LLD), Concurrency, DBMS, Operating Systems, Unit Testing.			
PROFESSIONAL EXPERIENCE			
Senior Software Engineer	IMPACT ANALYTICS, Bangalore	June 2026 – Present	
Agentic AssortSmart (AI Powered Retail Merchandise Planning Platform)			
- Building the agentic rebuild of AssortSmart, a merchandise planning SaaS where retailers decide what to buy, how much, and for which stores — AI agents draft clusters and plans for planner review and approval. - Developing the agentic microservice (FastAPI, LangGraph) whose conversational agent grounds plain language requests into store and season scopes, batch evaluates 100 silhouette scored candidate clusterings, and presents the top 3 with evidence for human approval, targeting turnaround from days to under 1 hour. - Designing the core backend as Go (Gin) microservices covering plan lifecycle, tenant configuration, and bulk save REST APIs, with goroutine worker pools and bounded channels for concurrent writes, context based timeouts, and JWT auth middleware. - Led the design of the per tenant ClickHouse planning store on an append only, never erase write model where facts land as atomic partition swaps and every decision is an insert resolved via latest state views, enabling version diff, undo/redo, concurrent writes without lock contention, and a full audit trail. Tech Used: Python, FastAPI, LangGraph, MCP, Go, Gin, ClickHouse, PostgreSQL, Redis, Kafka, GCP, Docker.			
Software Development Engineer 2	UBER (via EPAM Systems), Bangalore	July 2024 – May 2026	
Financial Risk Management (FRM) Scoping Platform (Uber Finance)			
- Cut Uber’s quarterly financial risk-scoping cycle time by 70% by replacing a manual Google Sheets workflow with a FastAPI and MySQL platform serving 36 REST endpoints across 8 screens, with output feeding PwC audit work papers. - Designed an 8-table normalized MySQL schema whose quarterly ETL aggregates 19M+ general-ledger rows into 300K rows, reconciled against public 10-Q filings. - Migrated raw SQL access to SQLAlchemy 2.0 ORM, fixing a latent column-aliasing bug and raising changed-module test coverage to 100%. Tech Used: Python, FastAPI, SQLAlchemy, Pydantic, MySQL, Redis, Bazel, pytest.			
Menu Ingestion & Automation Platform (Uber Eats)			
- Built an event-driven ingestion pipeline using Kafka, Apache Flink, and Apache Spark that processes 30,000+ vendor menus per month, cutting onboarding from 24 hours to 2 hours and saving \$600K+ annually. - Built an AI extraction pipeline with RAG and Gemini converting PDF and image menus into schema-validated catalog data with 98% fidelity. - Increased successful ingestions by 95% using IP rotation and dynamic proxy pools, and built ingestion health dashboards on Apache Pinot. Tech Used: Python, Apache Kafka, Apache Flink, Apache Spark, Apache Pinot, Selenium, Gemini, GCP, Docker.			
Software Development Engineer 2	MASTERS INDIA, Noida	December 2022 – June 2024	
GST Compliance & E-Invoicing Platform			
- Led the migration from a PHP (Laravel) monolith to asynchronous Python (FastAPI) microservices, mentoring junior engineers through the rollout and cutting p95 API latency from 1.2s to 300ms for 2,500+ enterprise clients. - Scaled bulk e-invoice processing to 100,000+ transactions per import and 1M+ daily transactions with async workers and idempotent retries. - Set up centralized ELK logging and New Relic monitoring with alerting, cutting incident triage time by 70%, and raised test coverage from 35% to 82% with pytest automated tests gating CI/CD releases. Tech Used: Python, FastAPI, PostgreSQL, Redis, Celery, Docker, ELK, New Relic, AWS.			
Software Development Engineer	GEEKSFORGEEKS, Noida	August 2021 – November 2022	
- Redesigned and migrated the backend from PHP to Django (Python), improving reliability for 100,000+ daily queries. - Designed data models and REST APIs for voting and pinning features, increasing premium subscription sales by 15 to 20%. Tech Used: Python, Django, MySQL, Redis, REST, Cron, AWS.			
EDUCATION			
B.Tech (Information Technology)	Institute of Engineering & Technology, Lucknow	July 2017 – June 2021	
ACHIEVEMENTS			
- Ranked 2260 out of 37,000+ participants in the Google Code Jam Qualifier Round 2021. - Finalist (top 3 nationally) at the Smart India Hackathon 2020 (MHRD).
